New Series Spherical Roller Bearings

JHS Series Spherical Roller Bearings

“JHS Features at a glance”

Introduction

With the introduction of our new JHS Series Spherical Roller bearings we have been able to cater to our customers' needs. By using innovative technology and materials, an optimal internal design and a standardized dimension stabilizing treatment our JHS Series Spherical Roller Bearings enables a longer service life, faster rotation speed, enhanced axial load performance and a product which can endure and perform in high temperature applications.

JHS series stands for Superior high-performance bearings for revolutionary industrial machinery and equipment. The bearings are more compact and have the same capacity and size but can offer a longer service life, higher productivity and less maintenance.

Features

4 advantages of our new JHS Series Spherical Roller Bearings

- ✓ Longer Service Life
- ✓ Speed Increase
- ✓ Axial Load Performance
- ✓ High-temperature environment

Test Results

Longer Service Life

By strictly controlling and monitoring our steel specifications, improvements in lubrication and adopting designs for high load capacity resulted in a longer service life for our JHS series Spherical Roller Bearings.

1) Strict Control of JTEKT's Steel Specifications

Non-metal inclusions are harmful and can reduce the bearing life, therefore by an even more intensive control on these non-metal inclusions the practical life of a bearing could be improved two times or even more than the calculated life, resulting in a 125 times higher dynamic load ratings.

JTEKT Ball & Roller Bearing Catalogue

Applied from CATNOB2001-4

JTEKT Large Size Ball & Roller Bearing Catalogue Applied from CATNOB2002E-1

Fig.2: Life comparison with L10/standard steel

2) Improved Lubrication

Fig.3: Improved life due to low temperature rise

Long life realized by arranging the rollers in a more stable position which can curb temperature rise and improve lubrication.

3) Adopting designs for high load capacity

High load capacity could be achieved by using more and larger rollers for the JHS series than for the R type spherical roller bearings (asymmetrical roller).
Dynamic load rating $\rightarrow$ max. $\times 1.5$ (life $\rightarrow \times 1.5$)
Static load rating $\rightarrow$ max. $\times 1.30$

Limiting speed 2400 r/min

Higher speed performance superior to R type

Axial Load Capacity (compared with R, RH types)

Fig.6: Test results under both radial and axial loads

Operating Temperature

Our JHS series are undergoing a dimension stabilizing treatment which enables the spherical bearing to perform at temperatures up to 200 °C and a variety of other extreme environments.

JHS Spherical Roller Bearing Design

Current Designs  New Designs

Type	Roller	Cage	Inner ring	Features
 R type / new RR type	Convex asymmetrical roller	Copper alloy prong type machined cage Code: FY	With center rib with rib on both sides to prevent rollers from falling.	High speed general type if application is unknown R or ROVS for vibrating application (223 type).
 RH type	Convex symmetrical roller	Steel plate pressed cage Code: //	Without center rib with guide ring, without ribs on both sides.	Higher load rating.
 RHR type	Convex symmetrical roller	Steel plate pressed cage Code: //	Without center rib with guide ring without ribs on both sides.	Maximum load rating
 RA type	Convex asymmetrical roller	Steel plate pressed cage Code: //	With center rib, without ribs on both sides.	For railway rolling stock.
 RHA type	Convex symmetrical roller	Copper alloy integral type machined cage Code: FY	Without center rib with guide ring with ribs on both sides (to prevent rollers from falling).	Higher load rating.

new

- ✓ Higher load capacity due to larger & longer rollers and improved steel quality.
- ✓ Higher limiting speed due to optimal internal design.
- ✓ Higher axial load capacity (F_a / F_r can be larger than e).
- ✓ Dimensional stabilisation up to 200 °C (S1) as standard.
- ✓ Split type steel cage, separate guide ring

New Series!...

	Load rating	Limiting speed	Axial load carrying capacity
new RZ	⊕⊕⊕⊕	⊕⊕⊕⊕	⊕⊕⊕⊕
RH/ RHR	⊕⊕	⊕	⊕
R/ RR	⊕	⊕⊕	⊕⊕

- excluded from design revision: 239xx series
- ROVS/ RROVS design for shaker screen applications

OD > 280 mm

R/RR and RHA design

R/ RR

- current R/ RR design remain, especially for high speed applications

RHA

- current RHA design remain, especially for windmill application and high load applications

Market-leading Expertise

...*"Matching today's expectations in Wind Mill applications"*...

As one of the world's leading bearing manufacturers for Windmill applications, JTEKT is keeping pace with rapid technological developments in this industry by using advanced technology and expertise to improve our products and services in order to meet today's more demanding Windmill applications.

Windmill applications are designed to last for 20 years, which is now further increasing to 25 years in recent developments. There are major factors which have a significant effect on a bearing life, such as a higher load capacity but also:

- ✓ Extreme high static load and moment load
- ✓ Axial load capacity
- ✓ Constant load change
- ✓ Low speed performance under poor lubrication
- ✓ Lower operating temperature

A strict control of our steel specifications and optimal internal design are featured in our newest series JHS Spherical Roller Bearings.
